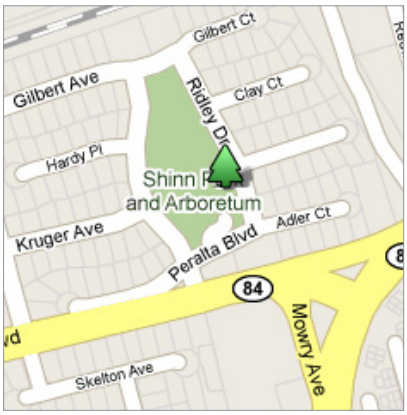
Cryptocarya rubra
Chilean Bellota

1251 Peralta Boulevard
Central District



Approximate location on map.

Vertical branching pattern and horizontal trunk lines.

Photo Taken: August 2010

CRL-3 TREE INFORMATION/July 2010

HEIGHT: 50 ft.
SPREAD: 64 ft.
DBH: 2 ft. 8.5 in.
QUANTITY: 1
NATIVE TO: Chile
LAST INVENTORIED: March 17, 1972

The Chilean Bellota was planted in 1876 by the Shinn family. It is located near the lankmark ginkgo tree and continues to thrive in a healthy state.

This tree is an evergreen tree native to Chile. Its unique bark features deep horizontal lines running throughout making it distinguishable among other trees. The Chilean Bellota grows to moderate height, and has shiny-green leaves with prominent veins.[19]
